1. The election of claims 1-9, and the cancellation of claims 10-34 is acknowledged.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishimura et al.

Note Fig. 3, where the "first amplifier stage" reads on the combination of FETs Q20 and Q21; the recited "non-linear load" reads on the combination of FETs Q3, Q4, Q11 and Q12; the recited "second amplifier stage" reads on the input pair of isolated gate FETs Q7 and Q8 in combination with the cross-coupled pair of isolated gate FETs Q9 and Q10. Not disclosed is the recited "switch" (line 3 of claim 1) but such would have been obvious to those having ordinary skill in the art because such switches are old and well-known in the art for the well-known purpose of

equalizing the output nodes of a differential amplifier prior to comparing the potential difference across the output nodes. The same is true for the limitation of a second switch across the output nodes of the second stage.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Note the additional references on the attached PTOL-892 form which disclose the various circuit structures of applicant's invention.
